

> CORTEN STEEL

■ Treatment process

Rusting with a fine pulverisation of an acid solution, in a controlled industrial closed room, several applications, carried out by a duly authorized partner in terms of environmental regulations.

Application of a transparent varnish in the form of a finishing powder in our powder coating line, or at a partner if oversized. The varnish stabilizes the rust, thus avoids any rust flow to protect the floor covering (paving, asphalt, concrete, ...) and to avoid rubbing spots (pedestrians...).

Example | Corten steel planter
